

Survey of students' satisfaction with distance education through the educational platform

	Questionnaire topics	totally satisfying (3)	somewhat satisfactory (2)	Unsatisfactory (1)
A. The method of teaching via electronic educational platforms				
1.	Sufficient information and registrations are provided to train students on how to enter the educational platform			
2.	Access to the educational platform and courses is easy and convenient			
3.	The lecture will be announced on the electronic platform well in advance			
4.	The scientific department is committed to implementing the weekly schedule of the electronic lectures schedule			
5.	The lecturer is keen to adhere to the date of uploading the lecture on the electronic educational platform			
6.	The lecturer explains the scientific material clearly through the educational videos recorded in his voice			
7.	The lecturer enhances the educational material uploaded electronically with additional explanatory videos through the platform			
8.	The lecturer responds and responds to students' inquiries and questions			
9.	The distance learning method increases students' thinking and self-learning skills			
10.	The lecturer motivates students to participate in the e-learning process			
11.	The scientific department responds to students' complaints and suggestions regarding the distance learning process and works to resolve them			
12.	Faculty members are available overtime on educational platforms to provide support and assistance to students			
13.	The method of e-learning via the Internet is generally positive			
14.	The content of the course offered electronically is comprehensive and sufficient			

Survey of students' satisfaction with distance education through the educational platform

15.	Presenting lectures via electronic platforms in a manner that does not allow direct communication between the lecturer and the student			
16.	Students play an active role by participating in the e-learning process			
17.	You have a computer / smart phone that helps you in the educational process via the electronic platform			
18.	Availability of the Internet at an acceptable speed during the e-learning period			
19.	The method of distance education helps to understand the scientific material clearly			
20.	There is appropriate technical assistance from the university to facilitate the use of technological means in the educational process			
B. Assessment via electronic platforms through electronic exams				
21.	The dates of the electronic exams are announced well in advance			
22.	The faculty member and course coordinator shall take into account the holding of electronic exams on a suitable date for all students			
	The faculty member and course coordinator follow up the students while they take the electronic exam on the platform			
23.	The faculty member and course coordinator overcome the obstacles and solve the problems faced by the students while taking the electronic exam on the platform and provide them with moral support			
	Entry to the exam through the platform was very easy			
24.	The electronic test ensures the integrity and transparency of the assessment			
C. Evaluation of student educational activities via electronic platforms				
25.	The scientific department uploads explanatory videos through the university platform to show how to write the work of the educational activities required of students			

Survey of students' satisfaction with distance education through the educational platform

26	The members of the scientific department instruct students on how to operate the activity and raise it on the electronic educational platform			
27	The members of the scientific department periodically respond and respond to students' questions on the topic of educational activity through the platform			
28	The topics of student activities are compatible with the content of the scientific course			
29	Ease of uploading activities on the form attached to the educational platform			
30	Student activity ensures the integrity and transparency of the assessment
